EXAMINER

KIM, SUN U

ART UNIT	PAPER NUMBER
----------	--------------

1723

DATE MAILED: 09/26/2003

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

10/044,078

Applicant(s)

MARTIN, DIDIER J.

Examiner

John Kim

Art Unit

1723

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 10 January 2002.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-10 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-10 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 10 January 2002 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on _____ is: a) ☐ approved b) ☐ disapproved by the Examiner.
If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

- 13) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☒ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
* See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892) 4) ☐ Interview Summary (PTO-413) Paper No(s). _____
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948) 5) ☐ Notice of Informal Patent Application (PTO-152)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449) Paper No(s) _____ 6) ☐ Other:

Art Unit: 1723

1. The information disclosure statements submitted on 1/10/02, 4/12/02 and 10/15/02 have been considered by the examiner.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 5,605,633 (hereinafter referred to as Nakamura et al) in view of U.S. Patent No. 5,766,478 (hereinafter referred to as Smith et al) and U.S. Patent No. 5,998,108 (hereinafter referred to as Martin). Nakamura et al teach a method for treating photographic waste water containing silver complex and thiosulfates comprising the steps of adding a water soluble complex forming polymer to photographic waste water to combine with silver and thiosulfate to form an insoluble polymer complex of silver, iron, etc. i.e. precipitates and separating precipitates from liquid phase by passing the waste water through ultrafiltration membrane wherein a photographic material is passed through a fixing tank (N3) and then through washing tank (W2) and finally processed in a stabilizing bath (N4) and the photographic waste water is obtained from washing tank (W2) (see figures 1-2; col. 15, lines 28-54; col. 4, line 46 – col. 5, line 8; col. 5, lines 36-44; col. 6, lines 7-28). Nakamura et al further teach that their method can reduce silver content of photographic waste water to 1 ppm and it is possible to further reduce the silver concentration in the filtrate to below 0.1 ppm with similar filtering means comprising two or more filters arranged in series (see col. 14, lines 36-58). Claims 1 and 9-10 essentially differ from the method of Nakamura et al in reciting the step of adjusting pH at a value in the range of from 3 to 6.5 and

Art Unit: 1723

allowing the effluent to pass through a nanofiltration unit with a cutoff threshold lower than Mx. Smith et al teach a method of removing silver from photofinishing waste solutions comprising the step of adding a water soluble polymer including polyethylenimine to the waste solutions and adjusting pH to a lower pH between 4 and 6 to optimally bind silver thiosulfate and filtering the solutions through a filter (see figure 1; col. 50, line 59 – col. 51, line 15; col. 1, lines 6-17; col. 2, line 66 – col. 3, line 3; col. 7, lines 1-23; col. 10, lines 41-63; col. 18, line 58 – col. 19, line 5). Martin teaches the method of removing silver and thiosulfate from photographic effluents comprising the step of passing the effluents through a nanofiltration unit having a water cutoff threshold of at least 200 to retain thiosulfate and silver complexes and yield a photographically useful permeate (see figure 1; col. 2, lines 10-12; col. 2, line 65 – col. 3, line 4; col. 3, line 31 – col. 4, line 39). It would have been obvious to a person of ordinary skill in the art at the time the invention was made to use polyethyleneimine as water soluble complexing polymer in the method of Nakamura et al by adjusting pH at a value in the range of from 3 to 6.5 for optimal binding of silver thiosulfate to the polymer and further removing silver thiosulfates by passing the effluent through nanofiltration unit to yield a photographically useful permeate as suggested by Martin. Regarding claims 2-3, Nakamura et al teach the separation of precipitates via ultrafiltration (see col. 4, lines 46-59). Regarding claim 4, Smith et al teach that pH is adjusted to an optimal pH in the claimed range (see col. 50, line 59 – col. 51, line 16). Regarding claims 5-6, Smith et al teach polyethyleneimine as a water soluble complexing polymer (see col. 10, lines 41-66; col. 18, line 58 – col. 19, line 5). Regarding claims 7-8, Smith et al teach that the concentration of the water soluble polymer is from about 0.001 weight to volume percent to about 25 weight to volume percent of final mixed solution (see col. 14, line 66

Art Unit: 1723

– col. 15, line 3). Assuming that the density of final mixed solution is 1 g/l, 0.001 wt/vol % to 25 wt/vol % of water soluble polymer is 0.001 g/l to 25 g/l. It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the quantity of polyethyleneimine in the range of from 15 to 20 g/l, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. In re Aller, 105 USPQ 233.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Patent No. 6,126,840 and 5,958,245 and EP 0 655 419 A1 teach the methods of removing silver from photographic effluents. U.S. Patent No. 5,346,627 teach a method for removing metals from a fluid stream.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to John Kim whose telephone number is (703) 308-2350. The examiner can normally be reached on weekdays from 7:00 AM - 3:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Wanda Walker, can be reached on (703) 308-0457. The fax phone number for official response is (703) 872-9306.

When sending a draft amendment by fax, please mark the paper as "DRAFT"; otherwise, mark the paper "OFFICIAL". This will expedite the processing of the paper.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 308-0651.
